## Education

- Feb 2009—Feb 2017    **Ph. D Candidate in School of Computing, KAIST** (advisor: Prof. Moonzoo Kim)  
Thesis: Automated Unit Test Generation with Realistic Unit Context Synthesis for Low False Alarms
- Mar 2007—Feb 2009    **M. S. in Computer Science, KAIST** (advisor: Prof. Moonzoo Kim)  
• Integrated Master and Ph. D program in computer science
- Mar 2003—Feb 2007    **B. S. in Computer Science, KAIST**

## Research Interests

My research interests span software testing and debugging especially for embedded software.

- **Automated Software Unit Test Generation**

To improve the reliability of embedded software in a low cost, I am working on improving the practicality of automated unit testing through concolic testing. I have developed an automated unit test generation framework using concolic testing to automatically generate unit test drivers/stubs and unit test cases which (try to) cover all possible execution paths of the target unit function. Through industrial collaboration research with Samsung Electronics, LG electronics, and Hyundai Motor Company, I have shown that our approach could detect bugs in smartphone communication module firmware, automotive control software, and Android kernel's device drivers.

- **Behavioral Coverage for Effective and Quantifiable Software Testing**

To improve the reliability of embedded software effectively, I am working on developing behavioral coverage with Prof. Willem Visser at Stellenbosch University. The behavioral coverage quantifies how much of the input space is covered using a combination of symbolic execution and model counting. In addition, we are working on symbolic execution techniques to increase the behavioral coverage efficiently during testing.

- **Effective Fault Localization using Mutation Analysis**

To identify buggy statements precisely, I have worked on a fault localization technique MUSE (Mutation-baSEd fault localization technique) based on mutation analysis. MUSE can localize a buggy statement after reviewing less than 10 statements for 6500 ~ 12600 LOC C programs. In addition, I have worked on improving MUSE to identify buggy statements in programs written in multiple programming languages such as C and Java using JNI interface.

- **Hybrid Directed Test Suite Augmentation**

To effectively augment regression test suites for evolving software, I have developed a hybrid directed test suite augmentation technique with Prof. Gregg Rothmel at University of Nebraska-Lincoln. The approach combines concolic testing and genetic algorithm which have different strengths and weaknesses to augment existing test suites more cost-effectively than each algorithm used singly.

## **Awards and Scholarships**

1. Korean Institute of Information Scientists and Engineers, 35th Student Research Paper Competition (graduate student track), **Second prize**, Apr 2016
  - **Y. Kim**, Effective Automated Concolic Unit Testing based on Realistic Unit Context Synthesis
2. Korea Conference on Software Engineering (KCSE), **Best paper award (short paper)**, 2016
  - **Y. Kim**, and M. Kim, Efficient Dynamic Symbolic Execution Search Strategy using Input Coverage
3. Samsung HumanTech Paper Competition, **Bronze award**, 2014
  - S. Moon and **Y. Kim**, MUSE: Precise Fault Localization based on Program Mutants
4. Korea Conference on Software Engineering (KCSE), **Best paper award (short paper)**, 2014
  - Y. Park, **Y. Kim**, J. Cho, and M. Kim, Effective Concolic Testing using a Symbolic Library
5. Korean Institute of Information Scientists and Engineers, 32nd Student Research Paper Competition (graduate student track), **Grand prize**, Apr 2013
  - S. Moon and **Y. Kim**, FEAST: Coverage-based Fault Localization with Fault Weights on Test Cases
6. Korea Computer Congress (KCC), **Best presentation award**, 2012
  - Y. Park, **Y. Kim**, and M. Kim, A Comparative Study of Static Analysis Tools: A Case Study on libexif by Using Coverity and Sparrow
7. Korea Computer Congress (KCC), **Best paper award**, 2012
  - Y. Kim, M. Kim, and Y. Jang, CREST-BV: An Improved Concolic Testing Technique with Bitwise Operations Support for Embedded Software
8. Korea Computer Congress (KCC), **Best presentation award**, 2011
  - Y. Kim, **Y. Kim**, M. Kim, Comparison of Search Strategies of KLEE Concolic Testing Tool
9. Korea Presidential Science Scholarship, Mar 2003 to Feb 2007

## **Patents**

1. Co-inventor, Application No. 10-2014-0032019 in Korea, Automated and Precise Fault Localization Technique using Mutants of a Target Program, Mar 19<sup>th</sup>, 2014
2. Co-inventor, Patent No. 10-1227024-0000 in Korea, Method of distributed scalable concolic testing for software reliability, Jan 22<sup>nd</sup>, 2010

## **Software Copyright Registration**

1. Co-developer, Registration No. C-2016-003350, Efficient Concolic Testing Tool, Feb 03<sup>rd</sup>, 2016 Co-developer, Registration No. C-2014-031612, Scalable Distributed Concolic Testing Tool, Dec 11<sup>st</sup>, 2014
2. Co-developer, Registration No. C-2014-031612, Scalable Distributed Concolic Testing Tool, Dec 11<sup>st</sup>, 2014

## **Research Experiences**

### **• Industry funded project**

1. Research assistant, Automated Unit Testing Framework for C programs, Samsung Electronics, 2015—Present
2. Research assistant, Applying Concolic Testing for Improving Reliability of Automotive Software, Hyundai Motor Company, 2015
3. Research assistant, Applying Concolic Testing for Embedded Software Testing Automation, LG Electronics, 2013—2015
4. Research assistant, Automated Unit Test Generation Framework by using Concolic Testing, Samsung Electronics, 2010—2014
5. Research assistant, Formal Verification of Flash Memory Device Driver, Samsung Electronics, 2007—2008

### **• Government funded projects (selected)**

1. Research assistant, Behavioural Coverage for Effective Software Testing, National Research Foundation of Korea (NRF), 2014—Present
2. Research assistant, Development of Mobile S/W Security Testing Tools for Detecting New Vulnerabilities of Android, Institute for Information and communications Technology Promotion (IITP), 2013—Present
3. Research assistant, Research and Development of Dual Operating System Architecture with High-Reliable RTOS and High-Performance OS, Institute for Information and communications Technology Promotion (IITP), 2012—Present
4. Research assistant, Practical Dynamic Symbolic Execution for Binary Programs, National Security Research Institute (NSRI), 2011
5. Research assistant, Improved Automated Test Case Generation through Parallelized Concolic Testing Technique, National Research Foundation of Korea (NRF), 2010—2011
6. Research assistant, Improving Embedded Software Reliability using SAT Solver, National Research Foundation of Korea (NRF), 2008—2009
